- **CODE FOR MAIN WEB PAGE**
- **SCREENSHOTS OF WEB PAGE**

*. Introduction

Our project is 'Hotel Management System'. Nowadays we all know very well the people are shifted to the world of Internet. If any random person goes to some unknown place and needs to take the hotel what he can do in an unknown place. That's why Internet is the best thing around us. Our project is to develop a hotel management system. How a hotel works. It is

consists of hotel booking, types of rooms, class of room, different booking site. How people can contact the manager to get the details or to consult for future booking the facebook, instagram and twitter accounts are also linked to the Homepage.

This site is developed using HTML and to add designs and make it more attractive we used CSS and javascript to make it as best as we can.

Different photos are included to give customer about the hotel. This

System is used to book hotel rooms and it is also used on oyo and other booking sites. Checkin, checkout options are included with Signup and login as an existing customer or new customer options are available.

* Acknowledgement

First of all we would like to thank you our faculty Mrs. Mamu Bali to give us this opportunity. This project is about Hotel Booking System. Course title is CS6326. We used HTML, CSS, Javascript to develop this project.

One's again thank you mam because of this project we learned many things new in this field of web development.

* Description

This web page is developed using HTML, CSS and Javascript. HTML is used to prepare the Main web page for the Hotel Booking System. CSS is used to make it more attractive and elegant. Customers are always attracted to the attraction we made for them. Different types of loading is used for different font Styling in it. Different links are provided on the home page to get info from Instagram, face book and twitter. In this use page you can select different types of rooms on basis of your requirement as AC, Non-AC. Rooms are available. Customer can book the rooms online and make online payment and book your room. This site is just an like how OYO and different booking sites works.

* Modules

This project is divided into 3 parts.

First part is named as HM file which deals with the coding of the main homepage of hotel booking sites and all the details of the hotel is included in this code.

Second part is named as CSS. Style 2.

This file deals with the ~~ss~~ programming in CSS which gives the

HTML home page styling and helped it to look far more attractive in it.

This module gives the looks and make it attractive for visitors.

Third part is included with the different codes for the elegant different font types. There are 3 different files present here for the fonts. Different images are included here and also a logo is there for the developer.

* Module development details and Students / Group members work in project.

① yash vardham (K19CK28)

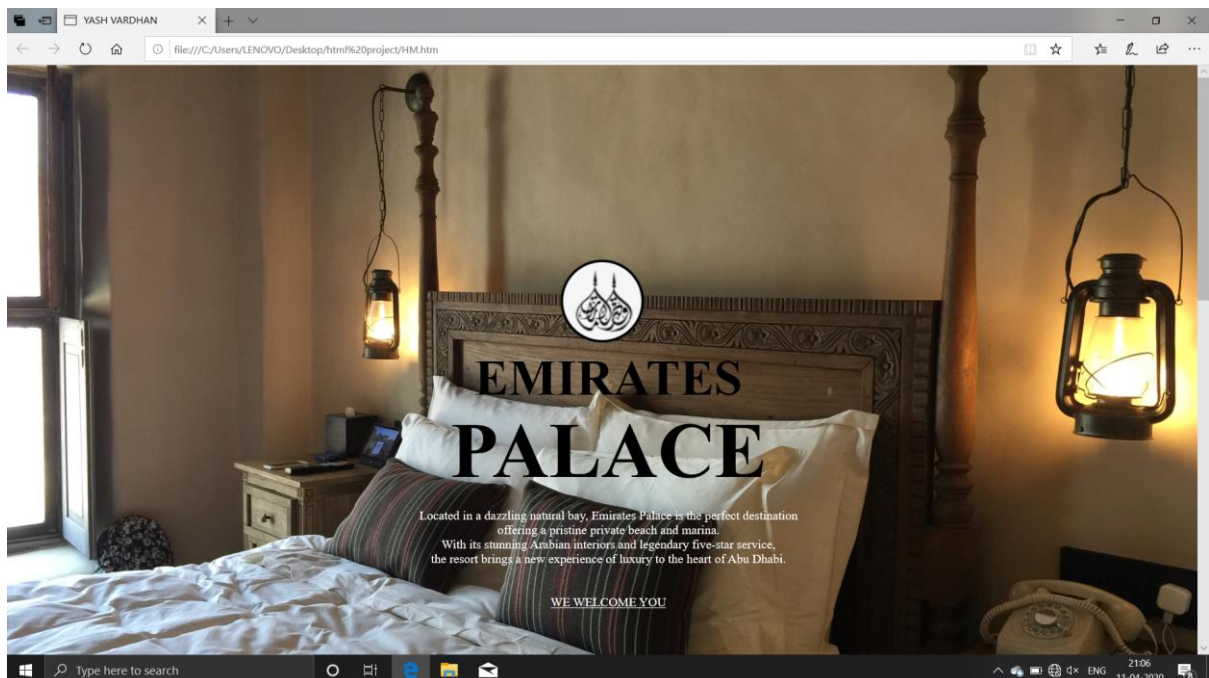

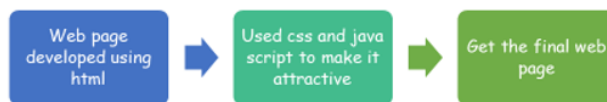

The coding modules are developed by yash vardham. The first and third module are developed by him and also main coding is done by him, and flowchart of final report is done by him.

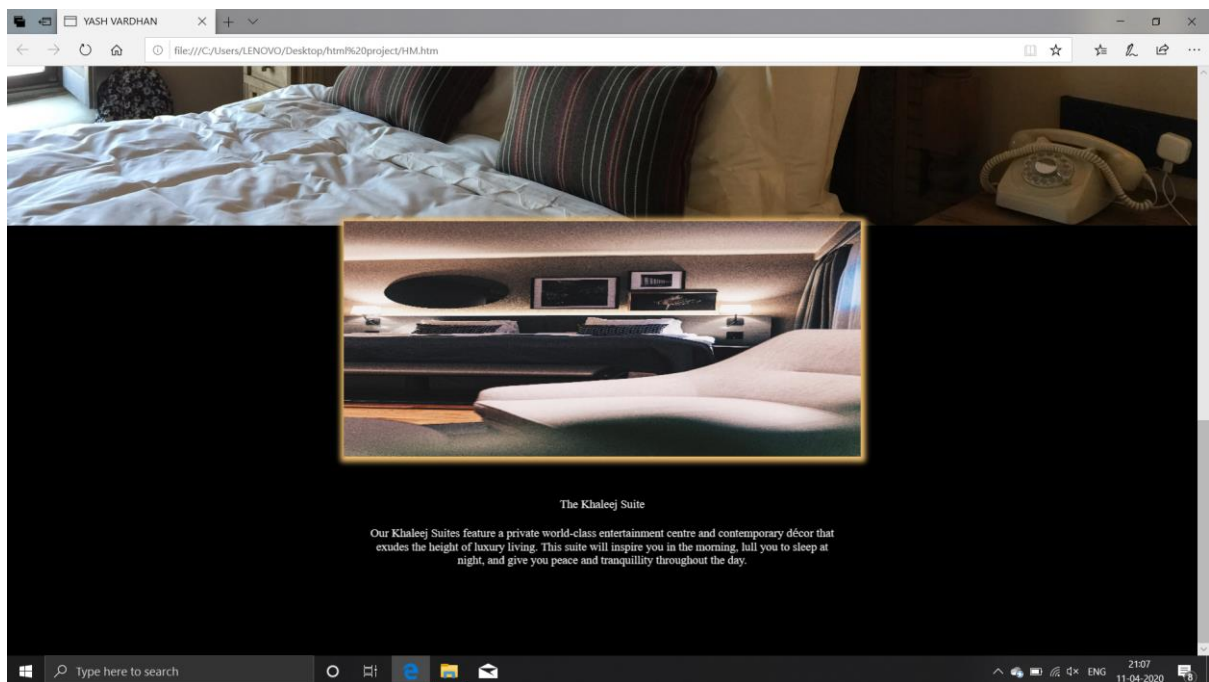

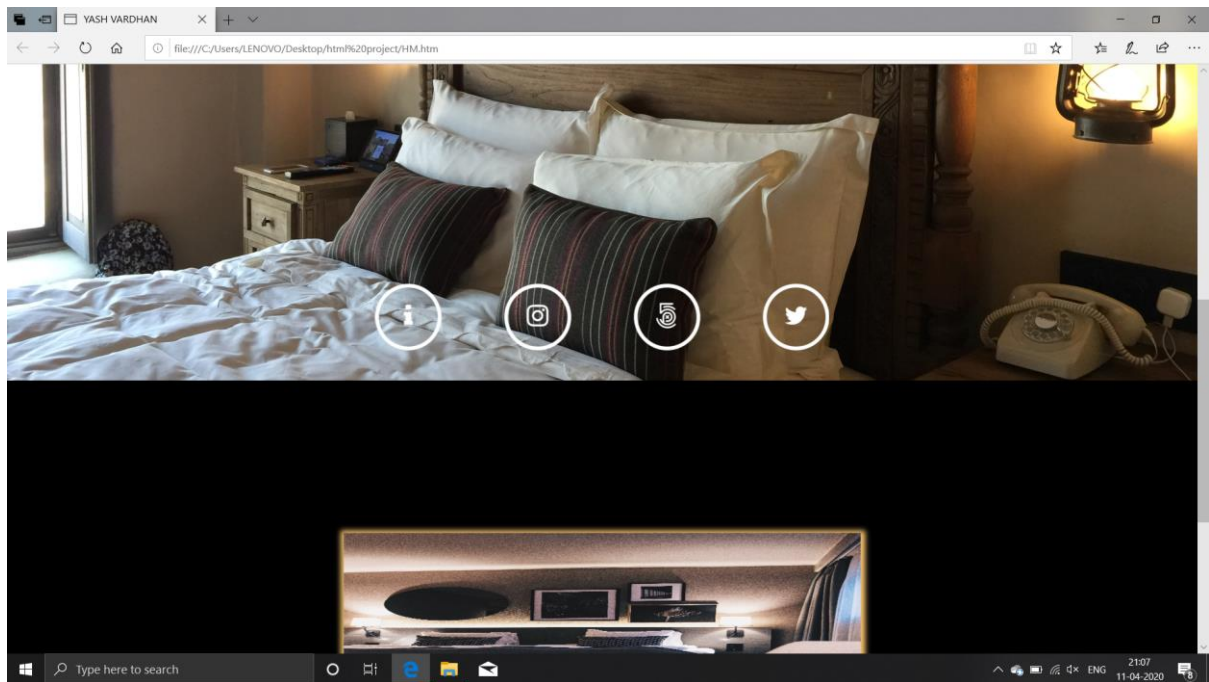

② Radharahaman Sharma (K19CK27)

The coding of CSS styling is done by him. And project report is done by Radharahaman. The final report and second module is done by this guy.

③ Bharath Reddy (K19CK29)

The synopsis is prepared by him. He helped in coding of modules and helped in diagram of module of homepage site.
